

SOLENOID COIL ASSEMBLY

Abstract of the Disclosure

A coil assembly includes a spool having a wire wound therearound to establish a coil. A spool terminal extends from the spool and the end of the wire
5 is wound around the spool terminal. A connector housing is coupled to the spool and a connector terminal extends therefrom. A portion of the connector terminal is adjacent to a portion of the spool terminal. Thus, the connector terminal can be relatively easily resistance welded or soldered to the spool terminal.
